forest to the east. Their southern limit is 131
bounded by a line from the Ruwenzori, through Beni to Bafwasende. The western boundary runs north from Bafwasende to Panga and to the confluence of the Bomokandi and Uele. (See Fig. 3.) Apart from the Lindi and Ituri rivers, Schebesta says that Pygmies also inhabit the areas near the Epulu, Ngayu, Nepoko, and Poko rivers. Putnam makes no attempt to delimit Mbuti territory, but his notes show that he traveled throughout the area described by Schebesta, with the possible exception of the extreme south, and found Mbuti everywhere, away from the major rivers as well as along their banks.

Schebesta makes the threefold division al- 197
ready mentioned, of Twa, Tswa, and Mbuti, 101
and further subdivides the Ituri Mbuti into [619].
three major groups: the Aka to the north; Sua to the south; and Efe to the east (Fig. 3). These are linguistic groups, speaking dialects of Mangbetu, Bira, and Lese, respectively.

Mbuti

betu, Bira, and Lese, respectively. Schebesta believes the Efe dialect to be the remnant of the original Pygmy language, and for this reason he considers the Efe archers to be culturally the purest of the three Mbuti groups. Costermans (1937) disagrees as to both the originality of the Efe language and the purity of Schebesta's particular Efe Mbuti. He asserts that among the Watsa-Gombari Efe, who according to Schebesta were not "true Pygmies," he found hundreds living in exactly the same manner as Schebesta's "true Pygmies." 197 101 114

Jadin (1936) considers that of Schebesta's three groups the Efe and the Sua have remained most faithful to their old way of life and finds that, on grounds of blood groups, the purest Pygmies are those who live farthest from their village neighbors, from whom they are clearly distinguishable by their biochemical index. 101 144 184

The Aka live mostly to the north of the Nepoko River, along the length of the Ituri as far east as Gombari. Thence southward, to the east of the Nduye, the Efe archers are found. The Sua roam from the Nepoko to the south side of the Ituri River, from Bomili in the west, almost to Mambasa in the east. Detailed information on the Aka is not available, though they seem to make more use of the spear than the other groups. 101 131 619 • [P. 159-D]

Mbuti

101 The term "Bambuti" was first applied by Schebesta (1933) to the Sua net hunters only, but after his second visit to the Ituri he widened his usage to include all the Ituri Pygmies (Schebesta, 1937). This is the sense in which it seems to be used by the Pygmies themselves and in which we use the term in this [197] study. The threefold linguistic subdivision of the Mbuti is the only attempt that has yet been made to divide the Mbuti into separate groups, but it is not yet certain how far this division has any anthropological validity. It is [619] impossible to speak of Mbuti tribes or sub-[614] tribes, and, although a number of clan names are known, no material available enables us to trace any semblance of a clan system. The only 621 certain units are the nuclear family and the 602 economic association of a number of such [594] families that form a hunting band. Schebesta (1948, 288 ff.) makes this point, using the terms "*Familie*" and "*Sippe*." He distinguishes "*Sippe*" from "*Grossfamilie*," the former being primarily an economic association of incidentally related families and the second laying the emphasis on common descent. The coalescence [614] of several "*Grossfamilie*" into a clan is a concept of little significance to the Pygmy, and the clan, Schebesta writes, is in any case widely dispersed.

621 The size of these hunting bands varies,

[ARCHERS]

613 614 A number of lineages are associated into clans, but these are widely dispersed and have neither political nor economic significance. Tri-
• 619 bal sense, says Schebesta, is entirely foreign to the Mbuti.

361 The bands are generally found on the edges of small villages, but still in the shade of the forest, according to Schebesta. Jadin (1936) says that only some Efe archers make their camp near the villages. Schebesta (1941, 132–133) finds that the exact location of the camps depends on the food quest, and that the presence of water and shade is a major consideration.

HABITATIONS

361 342 [462] [341] The huts are built in a circle around a clearing by the womenfolk of the individual families. Saplings are cut, bent, and twisted together to form a beehive-shaped frame, which is covered with large phrynium leaves. This is the kind of hut described by most sources. Schebesta also describes tunnel-shaped huts.

FURNITURE

352 The furniture of an archer hut is limited to a crude bed of sticks and lianas, raised from the

ETHNOGRAPHIC BACKGROUND

There are two major difficulties facing any discussion of the Mbuti. One is the fact that while they are true hunters and gatherers, they are nonetheless associated in some way, and apparently closely so, with the surrounding forest cultivators. The inseparability of the two peoples makes it especially difficult to know where to begin, as the Mbuti are one thing in one context and a quite different thing in another context.

The other difficulty lies in the fact that previous sources have not given us a clear idea of the structure of either group, Mbuti or villagers, and have completely misled us as to the nature of the relationship between the two. I have dealt somewhat with the latter difficulty elsewhere (Turnbull, 1956) and propose to deal with the former difficulty by giving a brief sketch of the nature of Mbuti society that will adequately provide a basis for a preliminary investigation of the actual nature of the relationship between the Mbuti and the villagers. Only then can we safely attempt to understand the nature of Mbuti social structure, even in their forest society, as divorced as it may seem to be from the village context.

It is impossible to give an accurate estimate of the population of the Mbuti of the Ituri Forest, as there has been nothing approaching an efficient census. Owing to the mobility of the individual hunting bands, and the lack of co-operation offered by villagers whenever queries are made about the number of Mbuti they "own," we must regard with suspicion any figures based on a count of bands attached to villages and an average band population. From my own experience, and from discussion with missionaries and administrators who have attempted counts, one way or another, I would hazard a guess at somewhere around 40,000, with no evidence to show that the population is increasing, but certainly none to show that it is decreasing.

The total population may be divided, as we have seen, into groups that emphasize one hunting technology or another, the two main groups being the archers and the net-hunters. The spear-hunters also use bows and arrows for defense as well as for occasional individual hunting. None of these groups can be said to have any political identity, however, any more than can the Mbuti totality, except in opposition to the villagers.

The only effective political unit is the band, which we have defined
